PPPI Introduces Load Bank for the Offshore Market

Darien (Dec. 10, 2004) – Professional Power Products (PPPI), a full service packager for the power generation industry, unveiled its first stainless steel load bank targeted at the offshore market. The 500KW freestanding load bank was designed and built by PPPI's engineering and fabrication teams. The load bank, made of 316 type stainless steel is capable of withstanding the harsh offshore environment found on oil platforms.

Professional Power Products has been designing and manufacturing both resistive and reactive loadbanks since 1992. PPPI builds freestanding, unit/radiator mounted, portable, and trailer-mounted load banks. For radiator mounted load banks residing inside of enclosures, PPPI offers its customers the ability to issue one purchase order for the tank, enclosure, and load bank. This option takes many of the logistic factors out of getting the load bank to the packagers' facility in a timely manner. Additionally, PPPI can build the load bank and enclosure in conjunction rather than the common industry practice of waiting for the load bank to arrive prior to completing the enclosure. Finally, the engineering of the enclosure and load bank are done under one roof, assuring the best design and layout for servicing the load bank and genset.

About Professional Power Products, Inc.

Professional Power Products Inc (PPPI), located in Darien, WI, is a privately held engineering and manufacturing company in the power generation industry. PPPI is a packager of diesel and natural gas gensets for numerous engine distributors and end users. Products designed by PPPI include Custom Genset Enclosures, Load Banks, UL Tanks, UL Switchgear, Circuit Breaker Cabinets and Control Panels. Founded in 1992, PPPI has become one of the largest independent packagers in the United States. For more information please visit www.professionalpowerproducts.com.
